

COMPANY PURPOSE

SCI serves carrier and reseller companies in the personal communications industry anywhere in the world by helping them determine and satisfy their billing, customer management, and real-time information needs through integrated software systems.

We will remain the dominant "back office" solution provider to the paging industry and become a major provider to other PCS segments by providing the best value solutions that are unique and demonstrably better engineered than competitors with a staff that understands the business of our clients and delivers it "right the first time and on time."

COMPANY PURPOSE

MPS assists organizations in the management of their paper documents through records storage, microfilming and electronic imaging.

We consistently provide the fastest and least expensive records management support available to Southern California organizations through client information retrieval and transmission.

COMPANY PURPOSE

Optivus Technology, Inc. designs, constructs, operates, and services state-of-the-art Proton Beam Treatment Centers for major medical centers anywhere in the world. Our cost-effective turn-key system provides the highest patient throughput, widest variety of treatments, and highest operational reliability of any proton therapy system. Our system at Loma Linda University Medical Center exemplifies our commitment to excellence, service, reliability, client satisfaction and product leadership. In addition, Optivus is dedicated to increasing public awareness regarding the effectiveness and availability of the life-saving benefits provided by proton therapy.
